

Duraline Products

Conveyor Belt Crafted and Engineered to Effectively Handle All Your Conveyor Application Needs.

When handling significant material transport, it is crucial to have a belt that provides consistent and efficient performance while ensuring reliability. In demanding conditions, your belt may be exposed to risks such as gouging, tearing, abrasion, or deterioration due to factors like oils, solvents, high temperatures, and harsh environments. This vulnerability can lead to interruptions in operations and higher costs—unless you have a sturdy belt solution specifically crafted to withstand tough applications...

Enter Duraline: a engineered conveyor belt designed to tackle any obstacle you encounter, embodying toughness, dependability, and exceptional long-lasting durability.

With Duraline belting, you can have complete confidence in its capacity to endure the challenges posed by even your most demanding materials. Go beyond last-minute repairs and relish the peace of mind that comes with uninterrupted operations, thanks to belts that consistently provide dependable performance, every day.

Explore our diverse range of Duraline options, customized to meet your exact needs.

Produced in accordance with Viacore's meticulous standards, Duraline inspires confidence in its capability to effectively fulfill the task.

Five Key Lines

Duraline belting has 5 key lines. Each offers unique carcass/cover combinations engineered to withstand specific operating conditions and material properties:

- **DuraHeat:** You handle demanding, high-temperature materials under abrasive conditions, requiring efficient and reliable belting that maintains its integrity. Operating in such challenging conditions can result in untimely failures, downtime, and increased maintenance expenses—unless you possess a belt designed to endure these extreme circumstances. The DuraHeat family of products is for you.
- **DuraRock:** Transporting significant quantities of crushed stone and sizable hard rocks, your conveying system demands dependable belting that can handle both severe abrasion and severe cut and gouging. Introducing the DuraRock family, the optimal solution tailored to your needs, meticulously engineered to provide the utmost strength and impact resilience required for your application.
- **DuraWood:** Moving a diverse array of wood products, including logs, cut-offs, wood chips, sawdust, plank boards, and bark, is part of your operation's daily challenges. Your conveyor belting must maintain consistent and efficient performance without deteriorating over time due to exposure to terpenes and resins. DuraWood is engineered with your application in mind.
- **DuraSteel:** Conveying materials over long distances or systems that have very short take-ups often require a steel cord construction. Your solution is in the DuraSteel belt family. Designed comprehensively to handle the harshest conditions you can subject it to, from cover to steel cord carcass.
- **Coal Power and Coal Power SAR:** Flame resistant belt that offers a premium carcass/cover combination designed to provide great performance under tough impact loading, while still providing excellent abrasion resistance. Safeguard your operation with High Performance belting that meets the ASTM D378-13.2 (old MSHA part 18, MSHA 2G) flame resistance specification.
